

Map, showing the planned survey areas to cover during the one 7-10 days survey in late November 2006 with two vessels hired by the Faroese Fisheries Laboratory, MS “Norðborg” and MS “Tróndur í Gøtu” to look for overwintering Norwegian spring spawning herring. The main focus areas will be north of the Faroes and east of Iceland, and in the Norwegian Sea (Jan Mayen and east of Jan Mayen) extending into the Norwegian zone west of the recent coverage with RV “G.O.Sars”.
