

5. a) TYPES OF SAMPLES REQUIRED (e.g., geological/water/plankton/fish/radionuclide)

Fish

b) METHODS OF OBTAINING SAMPLES (e.g., dredging/coring/drilling/fishing, etc. When using fishing gear, indicate fish stocks being worked, quantity of each species required, and quantity of fish to be retained on board).

Fish samples will be obtained by fishing, using the gear described in Section 3b. A total of 65 DSTs and 200 T-bar tags are available for implantation into cod (*Gadus morhua*). Any cod unsuitable for tagging will be sampled for biological information (length, weight, sex, maturity) and biological samples extracted (otoliths, skin tissue).

In addition to the cod sampling, we aim to collect samples of haddock (*Melanogrammus aeglefinus*) and whiting (*Merlangus merlangus*), N=100 per area fished (up to a maximum of 3 areas within Norwegian Sector). Again, all fish will be measured for length, weighed and sexual maturity noted.

6. DETAILS OF MOORED EQUIPMENT
