**Cruise Report
Cruise 267 RV 'Walther Herwig III'
03.09. - 24.09.2004**

Chief Scientist: Dr. Thomas Lang

1 Abstract

As part of the regular activities of the Institute for Fishery Ecology of the Federal Research Centre for Fisheries on biological effects of contaminants in marine fish species, studies were conducted in 13 North Sea and 5 Baltic Sea area. In addition to the examination of North Sea dab (*Limanda limanda*), Baltic cod (*Gadus morhua*) and Baltic flounder (*Platichthys flesus*) for macroscopically visible external and internal diseases and parasites, numerous samples were taken for studies on histopathological alterations in liver and spleen, contaminant-induced changes in enzyme activities (EROD), inorganic and organic contaminants and their metabolites (organochlorines, Methyl-Hg, PAH metabolites), age composition, condition factors, and organosomatic indices. In addition, hydrographical measurements were carried out (water temperature, salinity, oxygen content). Fish samples were frozen for the detection of radioactive substances and for measurements of contaminants in the framework of the OSPAR JAMP/CEMP and HELCOM BMP monitoring programmes.

The results of the examination of dab for macroscopic lesions largely confirmed last year's findings. The decreasing trend in prevalence of lymphocystis in dab from the North Sea apparently continued. The value of 1.8 % in the German Bight northwest of Helgoland was the lowest ever recorded. Dab from the platform areas P01 (Danfield) and P02 (Ekofisk) were characterised by elevated prevalences of lymphocystis, skin ulcerations (only area P01), the parasite *Stephanostomum baccatum* and a green discolouration of the livers due to a parasitic infection of the bile ducts (only area P02). The decrease in the prevalence of liver tumours in North Sea dab has continued. The prevalences of acute skin ulcerations in Baltic Sea cod varied between 1.2 % and 2.6 % and were considerably low compared to previous years. More results will be available after subsequent lab analyses of samples.

2 Objectives of the Cruise

1. Studies on biological effects of contaminants in fish
2. Studies on the occurrence of fish diseases and parasites
3. Sampling of fish for chemical analysis of radioactive substances, heavy metals and organic contaminants
4. Hydrographical measurements (salinity, temperature, oxygen)
5. Sampling of livers and other organs of fish for subsequent histological and biochemical studies
6. Sampling in the inner German Bight to detect changes related to the Elbe flood 2002.

3 Dates of the Cruise

RV 'Walther Herwig III' left Bremerhaven on 03.09.2004, and studies were started in the morning of 04.09. in area GB1 in the German Bight. Work in 12 other North Sea areas followed. On 17.09., RV 'Walther Herwig III' sailed into the Baltic Sea, after passing through the Kiel Channel. The work was continued on 18.09 in area B12 in Mecklenburg Bight. After having finished the work in the Baltic Sea in 4 further areas on 22.09., the RV returned to the North Sea and, according to plan, the cruise ended in the morning of 24.09. in Bremerhaven.

The location of the sampling areas and the cruise dates are shown in Figure 1 and Table 1a and 1b.

In 18 sampling areas (Fig. 1), a total of 81 fishing hauls was performed (towing time 1 h) (see Table 1a). In the North Sea, the GOV was used, in the Baltic Sea a 140 ft bottom trawl with rock hoppers. Hydrographical measurements were made at 34 stations (see Table 1b).

4 Preliminary Results

4.1 Dab (*Limanda limanda*)

In total, 10,993 dab were examined for the occurrence of externally visible diseases and parasites and 1,307 dab for the occurrence of liver anomalies. Results are given in Table 4 and 5. The decreasing trend in prevalence of lymphocystis in dab from the North Sea has apparently continued since the previous year. The value of 1.8 % in the German Bight northwest of Helgoland was the lowest ever recorded. In accordance to previous cruises, generally high prevalences of skin hyperpigmentation (increased aggregation of green to black pigment spots) were noted in areas N11, N06 and N04. The prevalence in areas in the German Bight has increased compared to previous years. Dab from areas P01 and P02 showed elevated prevalences of lymphocystis, skin ulcerations (only in P01), *Stephanostomum baccatum* (parasite in the skin) and green discolouration of the livers (only in area P02).

Liver tumours in dab \geq 25 cm total length were most prevalent off the British coast (areas N22 and N07) and in the inner German Bight (area GB1). However, prevalences were low in general and did no longer show distinct spatial patterns. Dab in areas N06 and N07 off the Scottish coast again showed a pronounced liver parasitism with nematodes and acanthocephalans.

A variety of samples were taken for subsequent chemical analysis of contaminants as well as for biological effects measurements. More comprehensive results will be available after all samples obtained have been processed.

4.2 Cod (*Gadus morhua*)

3,676 cod from the Baltic Sea were examined for the occurrence of externally visible diseases and parasites (see Table 6). The prevalences of acute/healing skin ulcerations were in the range of 1.2 % to 3.6 % and were considerably low compared to previous years.

4.3 Flounder (*Platichthys flesus*)

525 Baltic flounder examined for externally visible diseases (Tab. 7). The prevalence of lymphocystis was high but in the normal range and the prevalence of acute/healing skin ulcerations was comparatively low (0.0 % to 3.0 %).

5 Miscellaneous

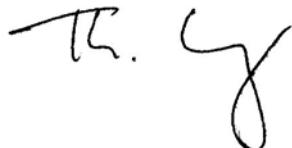

The mean catch data of the most frequent fish species are provided in Table 2; Table 3 gives results of the hydrographic measurements.

6 Participants

Dr. Thomas Lang (Chief Scientific)	IFÖ Cuxhaven
Ursula Kürschner	IFÖ Cuxhaven
Thomas Tepperies	IFÖ Cuxhaven
Dr. Michael Haarich	IFÖ Hamburg
Alexander Schulz	IFÖ Hamburg
Susanne Ciesielski-Schmeichel	IFÖ Hamburg
Meike von Klinkowström	IFH Hamburg
Aleksandras Rybakovas	Univ. Vilnius, Lithuania (guest scientist)
Paul Kotterba	Univ. Greifswald
Nico Geveke	Univ. Oldenburg
Kerstin Rapp	Univ. Stuttgart
Torge von Zengen	Univ. Hamburg

7 Acknowledgements

Thanks are due to Captain Zimmermann and his crew and to the scientific staff for constructive work and a good atmosphere on board.

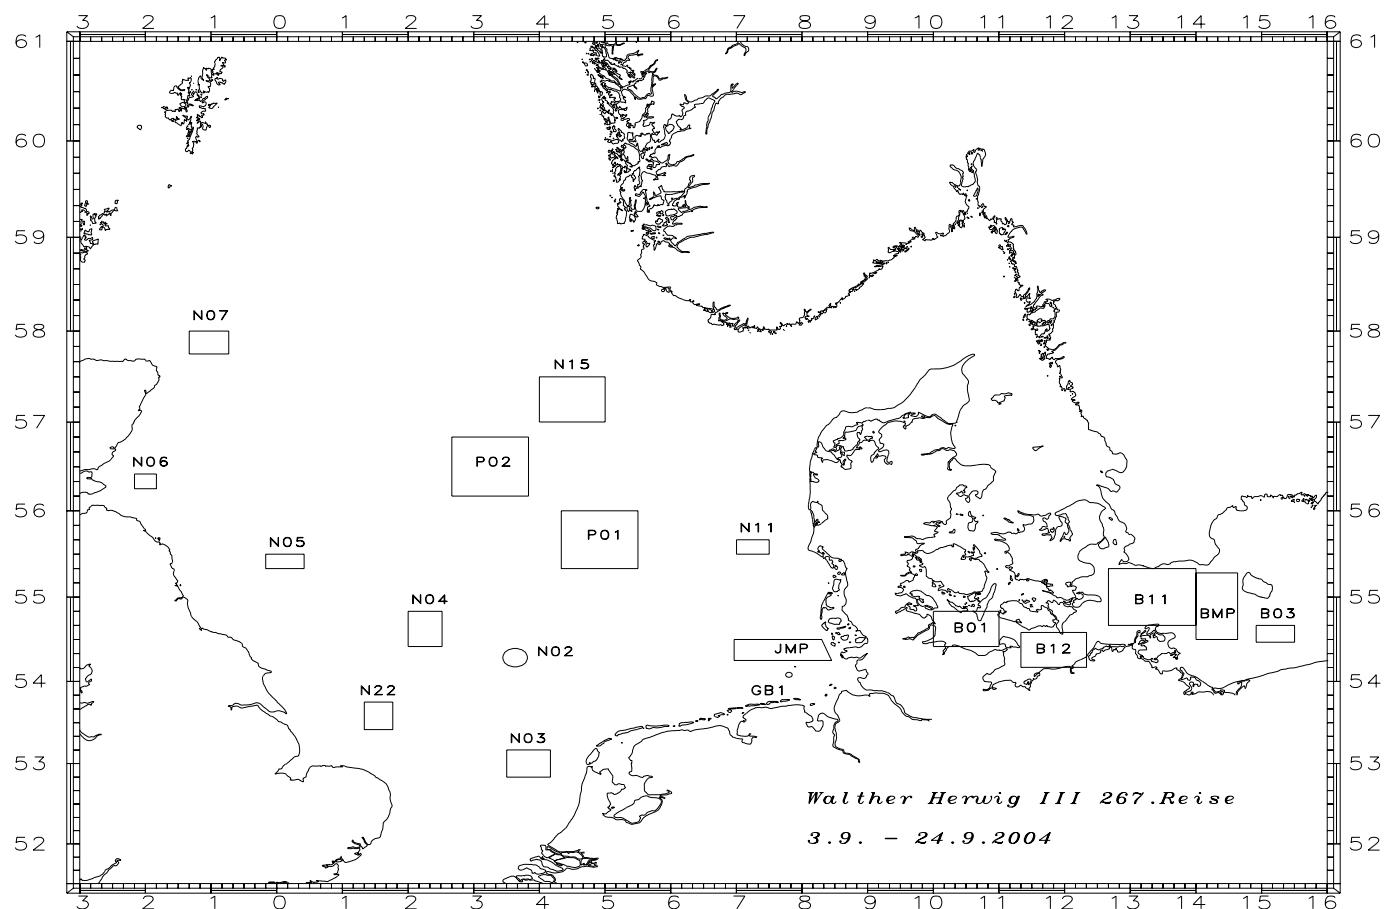

Dr. Thomas Lang

(Scientist in charge)

FOR COLLECTING CENTRE USE

CRUISE SUMMARY REPORT

Centre: DOD Ref. No.:

Is data exchange restricted Yes In part No

SHIP enter the full name and international radio call sign of the ship from which the data were collected, and indicate the type of ship, for example, research ship; ship of opportunity; naval survey vessel; etc.

Name: Walther Herwig III**Call Sign:** DBFR**Type of ship:** Research Vessel**CRUISE NO. / NAME** 267

enter the unique number, name or acronym assigned to the cruise (or cruise leg, if appropriate).

CRUISE PERIOD start 03/09/2004 to 24/09/2004 end
(set sail) day/ month/ year day/ month/ year (return to port)

PORT OF DEPARTURE (enter name and country) Bremerhaven, Germany**PORT OF RETURN** (enter name and country) Bremerhaven, Germany

RESPONSIBLE LABORATORY enter name and address of the laboratory responsible for coordinating the scientific planning of the cruise

Name: BFAFi, IFÖ, ASt Cuxhaven**Address:** Deichstr. 12, 27472 Cuxhaven**Country:** Germany

CHIEF SCIENTIST(S) enter name and laboratory of the person(s) in charge of the scientific work (chief of mission) during the cruise.

Dr. T. Lang, BFAFi, IFÖ, ASt Cuxhaven

OBJECTIVES AND BRIEF NARRATIVE OF CRUISE enter sufficient information about the purpose and nature of the cruise so as to provide the context in which the report data were collected.

Investigations on biological effects of contaminants, including fish diseases and parasites

PROJECT (IF APPLICABLE) if the cruise is designated as part of a larger scale cooperative project (or expedition), then enter the name of the project, and of organisation responsible for co-ordinating the project.

Project name:**Coordinating body:**

PRINCIPAL INVESTIGATORS: Enter the name and address of the Principal Investigators responsible for the data collected on the cruise and who may be contacted for further information about the data. (The letter assigned below against each Principal Investigator is used on pages 2 and 3, under the column heading 'PI', to identify the data sets for which he/she is responsible)

- A. Dr. T. Lang, BFAFi, IFÖ, Cuxhaven
 - B. Dr. M. Haarich, BFAFi, IFÖ, Hamburg
 - C.
 - D.
 - E.
 - F.

MOORINGS, BOTTOM MOUNTED GEAR AND DRIFTING SYSTEMS

This section should be used for reporting moorings, bottom mounted gear and drifting systems (both surface and deep) deployed and/or recovered during the cruise. Separate entries should be made for each location (only deployment positions need be given for drifting systems). This section may also be used to report data collected at fixed locations which are returned to routinely in order to construct 'long time series'.

SUMMARY OF MEASUREMENTS AND SAMPLES TAKEN

Except for the data already described on page 2 under 'Moorings, Bottom Mounted Gear and Drifting Systems', this section should include a summary of all data collected on the cruise, whether they be measurements (e.g. temperature, salinity values) or samples (e.g. cores, net hauls).

Separate entries should be made for each distinct and coherent set of measurements or samples. Different modes of data collection (e.g. vertical profiles as opposed to underway measurements) should be clearly distinguished, as should measurements/sampling techniques that imply distinctly different accuracy's or spatial/temporal resolutions. Thus, for example, separate entries would be created for i) BT drops, ii) water bottle stations, iii) CTD casts, iv) towed CTD, v) towed undulating CTD profiler, vi) surface water intake measurements, etc.

Each data set entry should start on a new line – its description may extend over several lines if necessary.

NO., **UNITS** : for each data set, enter the estimated amount of data collected expressed in terms of the number of 'stations'; miles' of track; 'days' of recording; 'cores' taken; net 'hauls'; balloon 'ascents'; or whatever unit is most appropriate to the data. The amount should be entered under 'NO.' and the counting unit should be identified in plain text under 'UNITS'.

TRACK CHART: You are strongly encouraged to submit, with the completed report, an annotated track chart illustrating the route followed and the points where measurements were taken.	Insert a tick(✓) in this box if a track chart is supplied	<input type="checkbox"/>
--	--	--------------------------

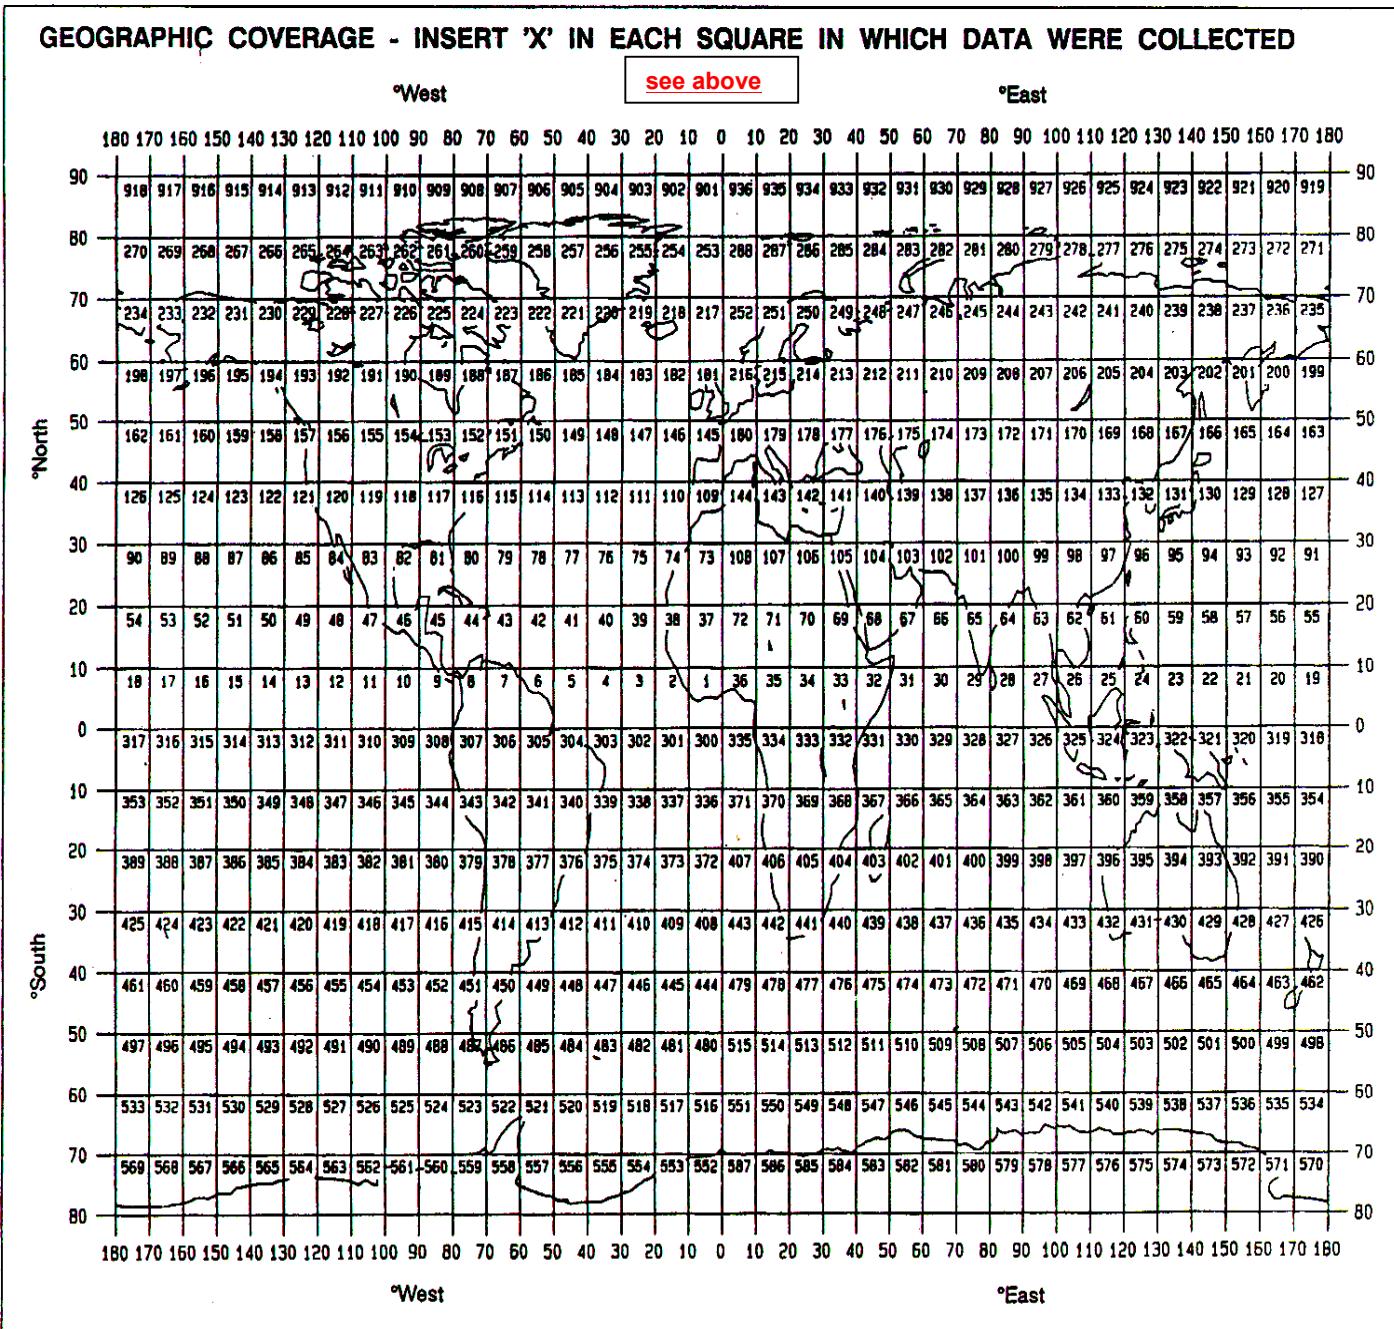

GENERAL OCEAN AREA(S): Enter the names of the oceans and/or seas in which data were collected during the cruise – please use commonly recognised names (see, for example, International Hydrographic Bureau Special Publication No. 23, 'Limits of Oceans and Seas').

North Sea, Baltic Sea

SPECIFIC AREAS: If the cruise activities were concentrated in a specific area(s) of an ocean or sea, then enter a description of the area(s). Such descriptions may include references to local geographic areas, to sea floor features, or to geographic coordinates.

Please insert here the number of each square in which data were collected from the below given chart

215,216

THANK YOU FOR YOUR COOPERATION

Please send your completed report without delay to the collating centre indicated on the cover page
